FOAC Meeting-November 2, 2004

Paris, France

Recent Performance

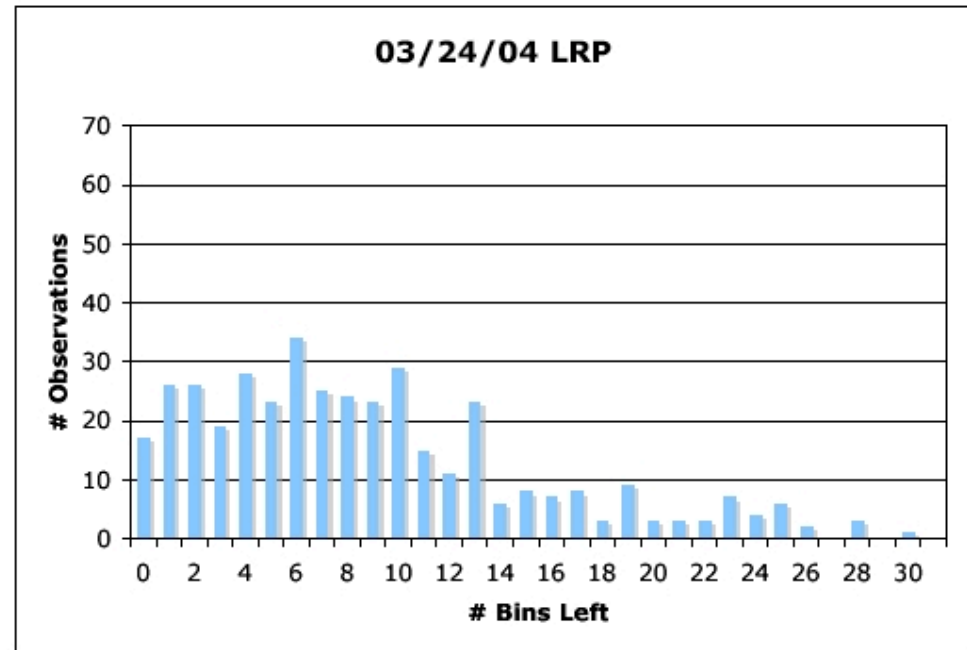

- **Preliminary Statistics for Cycle 5.5 (4/1/04 - 10/1/04):**

	Time	Efficiency	Cy4 Ave.
● Total science:	4.99 Msec	32.2%	37.4%
● Primary science:	3.75 Msec	24.0%	22.1%
● Secondary science:	1.24 Msec	8.2%	15.3%
● Survey Programs:	0.69 Msec	(4.5%)	(11.9%)
● Background Program:	0.59 Msec	(3.8%)	(3.4%)
● Lower total due largely to more aggressive scheduling practices (i.e., our attempts to reduce number targets from previous cycles).			
● Harder observations, more alignments and thermalization time.			
● Have actually <i>increased</i> # of constrained observations significantly.			

LRP--Mar. 24, 2004

Overall Performance (as of 10/1/2004)

Summary of All Science, Cycles 1-5.5

Cycle	N(obj)	N(obs)	Sci. Time (ks)	Eff (Tot/Pri)%
1	623	884	8914.6	28.2/28.2
2	527	736	9781.6	31.0/28.5
3*	522	868	13387.3	31.9/17.9
4	416	689	11995.1	37.9/22.3
5	179	326	4993.4	32.2/24.0
TOTAL	2267	3503	49072.0 ks	

*Cycle 3 was 16 months including 2 months of down time.
(Info thanks to Alex Fullerton.)

Expected Carry-over to Cycle 6

Schedulable programs carried over from Cycles 2-5 into the Cycle 6 time period (April 2005 - April 2006), based on LRP run of Oct. 6, 2004.

	Observations	Exp. Time (ks)
	-----	-----
B programs:	2	16
C programs:	5	41
D prime:	6	99
D survey:	11	145
E prime (Std):	36	740
E prime (Legacy):	8	223
E survey:	26	498
P programs:	1	11
Q programs:	1	20
M programs:	5	34
	----	-----
TOTALS:	101	1827 ks

On HOLD: Totals

	No. Obs	Exp. Time	Comments
	----	-----	-----
		(ks)	
B programs:	0	0	Was 3/49 at last FOAC.
C programs:	10	89	Was 13/142.
D programs:	24	66	Was 41/202.
E Std. programs:	17	85	New
E Sur. Programs:	7	162	New; PI holds.
E Leg. programs:	28	1137	2-year programs.
P programs:	37	241	Was 42/257. (Include. 5 moving target obs)
M programs:	4	50	
Z programs:	1	33	2007 - FUSE/COS Cross Calibration (!)
	----	-----	
TOTALS:	129	1865.6 ks	

On HOLD: Overbright (Subset of previous pg.)

	Observations	Exp. Time
C programs:	9	87 ks
D programs:	23	63 ks
E programs:	15	35 ks
P programs:	32	124 ks
TOTAL:	79	309 ks

Note: Not all of these will require defocus technique.
Details are still being assessed.

Total Carry-over to Cy6

	Observations -----	Exp. Time -----
B programs:	2	16 ks
C programs:	15	131 ks
D programs (std):	30	165 ks
D programs (sur):	11	145 ks
E programs (std):	53	825 ks
E programs (leg):	36	1360 ks
E programs (sur):	33	661 ks
P programs:	38	252 ks
Q programs:	1	20 ks
Z programs:	1	33 ks
M programs:	9	84 ks
	----	-----
TOTAL:	229	3692 ks

**Total Survey CO:
806 ks**

**Total Prime CO:
2886 ks**
 (of which 1866 ks
 is on HOLD.)

Z0xx	3	81	0	0
Z9xx	0*	0*	56	412
	163	1913	418	3963

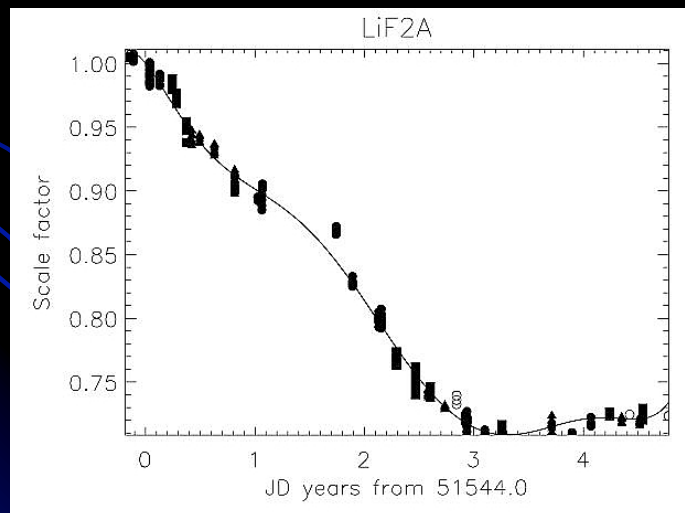

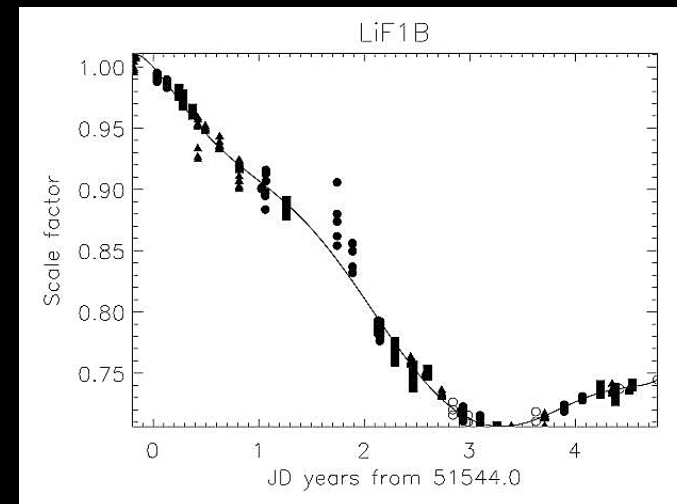

*Remaining Z9XX targets removed from MPDB, May 2004.

FUSE Flux Calibration

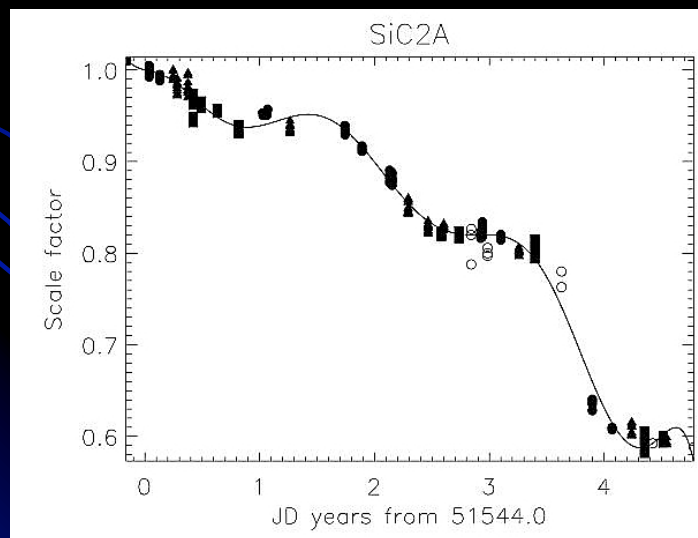

- **Monthly monitoring program of WD standards continues.**
 - Sensitivity has been stable in 2004.
 - (Charts on following pages.)
- **Safing event (closed doors) in early June 2004.**
 - No evidence of any sensitivity impact in calibration data.
- **High Voltage was raised (on all but segment 2A) on July 20, 2004. No ill-effects seen. New calibration files obtained and incorporated into CalFUSE.**

LiF Channel Sensitivity

SiC Channel Sensitivity

LWRS to MDRS Swaps

- Implemented in July 2004.
- Carefully reviewed science requirements of any/all current observations moved from LWRS to MDRS.
 - Doubled requested time only for targets with bona fide requirement for SiC coverage.
 - Set flag to use multiple Pkups per orbit.
 - Exempted SAFTSNPs and SiC-only bright target observations.
- ~100 observations affected; ~140 ks time impact.
- In Cycle 6 and beyond, require MDRS use for new HIST observations (I.e., require specific justification for new LWRS HIST requests).

Operations Status

- We have continued using two enhancements to improve sky availability:
 - Careful use of partially stable orbits.
 - Implemented “slow slew rate” for slews leaving marginal torque regions.
 - Use of positive roll offsets (up to 25 degrees).
 - Better MTB alignment to local B fields.
- As of now, sky coverage is as advertised for Cycle 6 NRA.

Operations Status, Gyros

- As of last FOAC, we were operating in 2-gyro mode on IRU-B.
- IRU-B developed a noisy pitch gyro, discovered Aug. 2004 (before it was a problem for operations).
 - Different gyro symptom than we had seen previously.
- Performance continued to degrade exponentially through August-September. (Chart-next page.)
- By mid-September, significant impacts seen for acq-reacqs and interplay between unloading and control functions.
 - Sept. 24th: IRU-B was power-cycled in attempt to reset the path-length controller circuit (dither mechanism--suspected problem).
 - No improvement was obtained.
- Sept. 28, 2004: transitioned to 1-gyro mode on IRU-B; have operated that way ever since. Guiding performance has been excellent. [chart]
- Except for minor tweaks to script timing and other parameters, operations have been nominal.
 - Slewing, unloading, target acqs-reacqs have been well-behaved.

IRU-B Pitch Gyro Degradation

Jitter Examples

CalFUSE 3.0 Update

(Most info supplied by Van Dixon.)

Since the April FOAC meeting:

- ✓ Upgraded OPUS and AUTODOG to support v3.0
- ✓ Completed a new set of calibration files (see ->)
- ✓ Ported CalFUSE v3.0 to the Mac.
- ✓ Released CalFUSE v3.0.7 in mid-August 2004.
- ✓ Released several updates to cf_edit.
- ✓ Began delivering v3.0 data to MAST in early Sept. 2004.

New Calibration Files:

- New GEOM, PHAX, ASTG, and WAVE files improve resolution and wavelength calibration.
- VOLT - Detector HV raised in July
- MIRR - motion correction
- AEFF - New files for 2003-04
- BKGD - New files for 2003-04

CaFUSE: Ongoing Work

- Development of methods (and tools) to filter and combine IDF files.
- Wavelength-dependent effective-area curves for the entire mission.
- Improvements to on-line documentation of v3.0.
- PASP article on CaFUSE v3.0.
- Ongoing calibration file production and implementation (flux cal, backgrounds, etc.).
- Pipeline module(s) for overbright targets? [TBD]

Data Archiving and MAST

- All MAST raw files are v3.0 compatible.
- All but about 70 processed files are v1.8.7 or above.
- We are generating housekeeping files for all archival FUSE observations.
 - “Target of opportunity” temporary hire in control center.
- Problem discovered Sept. 2004: No IDF retrievals!
 - Discovered locally--had not heard from users. (Was it a problem and no one complained to us?)
 - **Most users grab final processed data files?**
 - Miscommunication with MAST; we thought this had been implemented. They now say the ICD needs to be updated before they will correct.
 - Testing covered ingest, but no testing of retrieval was possible prior to going live, and this apparently fell through the cracks.
 - Should be fixed by mid-November.

FUSE--MAST Retrievals

Pending Work / Issues

- **Alignment tools and modeling.**
 - Feedback process to improve predictive motions.
 - Would improve alignments and data quality for everyone.
 - Might allow lowered frequency of alignment activities.
- **Calibration file production: automate/streamline.**
 - To ease burden on reduced staff downstream.
- **Calibrations to improve final archive.**
 - LSF characterization, “Worm” mapping, etc.
- **Reprocessing/final archive of earlier data.**
- **1-wheel contingency planning.**
 - In project’s best interest to scope this out before it happens.
- **E/PO activity: What can we improve or do differently?**
