

Coordinated Observations of MK501

The coordinated observations of the BL Lac object, announced in the first Newsletter, were successfully carried out towards the end of August 1978 with the IUE, HEAO-1, 200-inch (visible) and 100-inch (IR) at Hale Observatories, 300-ft at Green Bank and 46-m at Algonquin. A number of scientists from these institutions are participants in the campaign. The data reduction and analysis are currently in progress.
