

IUE Observatory Schedule for July -- September 1979  
and  
Scheduling Policy

The schedule for the second quarter of IUE's second year has been completed and is given below. In the following we also give a set of policies we use for scheduling purposes. If you have questions about the schedule, you can contact Drs. D. K. West or C.-C. Wu at Code 685, NASA/Goddard Space Flight Center. Greenbelt, MD 20771. Telephone number is 301 344-7537.

- (1) For a given time, the programs which have minimum number of objects in the solar avoidance zone and the Beta 55-95 degrees zone (hot OBC) will be scheduled.
  - (2) With considerable flexibility, one visit will be scheduled for the programs with less than 6 shifts and two visits for those with greater than 8 shifts. So for those programs which have small number of shifts, we can no longer guarantee that all their targets will be available.
  - (3) Specific time observations can be honored if requested well ahead of time (before May 15)
  - (4) Programs with small number of targets and those which have all targets in a localized region, possible conflict with the Moon will be checked manually.
  - (5) For solar system objects, it is the guest observer's responsibility to check the dates for the best planet-satellite configurations and request observations be made on specific dates.
  - (6) High and low radiation shifts are distributed simplistically by the policy of 16-hour double shifts (exceptions: BL Lac and QSO programs, etc. may receive more than 50% of their time in US1; Beta Cephei star programs assigned US2 shifts only).
  - (7) No attempt to team up the guest observers (GO) and staff members for any reason.
  - (8) Two to four shifts per month are set aside for maintenance. No time is scheduled for targets of opportunity.
-

- (9) At the end of each month, the Observatory absorbs the 2-hour loss.
- (10) A. Boggess has decided to reimburse those programs which lost 3 hours or more due to hardware or software failures. We have never heard of time lost due to errors made by the Observatory staff.
- (11) Conflicts with teaching obligations (mid-term, final examination, etc.), AAS meetings and the IAU General Assembly etc., will not be considered for scheduling purposes.
- (12) After the schedule for an integral number of months has been completed and sent to the guest observers, the Observatory will not initiate any revision unless it has strong scientific justification. It is up to the GO to make their own arrangements and inform the Observatory of those arrangements.

C.-C. Wu
