

IUE Observatory Schedule for October 1979 - February 1980

The schedule for the last five months of IUE's second year has been completed and is given below. It is presented in a new format which should be less ambiguous and easier to read than the old version. You will notice that some first year programs have been scheduled 3-5 extra hours. These are the programs which lost three hours or more because of ground system failures (computer crash, loss of telemetry, etc.) and the Project Scientist has decided to reimburse them for the loss. If a guest observer is bumped by target of opportunity observations, he will be reimbursed for an equal amount of time even if it is only one hour (or less if he insists).

IUE's second year effectively has only 11 months and it will end in February of 1980. The main causes for the short year are: Observatory maintenance has been taking 2-4 shifts per month instead of the 6 shifts per month originally planned; and there has not been too many bright and interesting targets of opportunity for 1979.

If you have any questions, please call me or any other Resident Astronomers at 301-344-7537.

Chi-Chao Wu
