

Reprints of IUE ESA Newsletter Reports

In this Newsletter we are reprinting three reports from recent IUE ESA Newsletters. One of them summarizes a recent workshop on UV Stellar Classification. The other two deal with technical details of the analysis of IUE spectra. In one, West and Shuttleworth report their results in reducing noise by adding spectra. This topic also was discussed by J.T. Clarke in IUE NASA Newsletter No. 14, May, 1981. In the other Ponz and Penston report a technique they devised for removing the geocoronal component of Lyman α from low dispersion spectra. Users who want more information on this technique are requested to write directly to Ponz. The most recent address we have for him is:

European Southern Observatory
Garching bei München
Germany

Users who are intrigued by this sample of ESA reports and who want to receive the IUE ESA Newsletter should write to

Mrs. S. Babayan
European Space Agency
8-10 Rue Mario-Nikis
75738 Paris Cedex 15
France
