VO NEWS FROM AROUND THE WORLD

VO News

A summary of Virtual Observatory news for the US astronomical research community. Supported and compiled by the US Virtual Astronomical Observatory.

VAO Tools & Services

- **Data Discovery Tool** – Retrieve astronomical data about a given position or object in the sky.
- **Iris: SED Analysis Tool** - Find, plot, and fit spectral energy distributions (SEDs) with this desktop application.
- **Time Series Search Tool** – Discover time-series data from three major archives & analyze them with the NASA Exoplanet Archive periodogram application.
- **Cross-Comparison Tool** – Perform fast positional cross-matches between an input table of up to 1 million sources and common astronomical source catalogs.

VO Community Day in Baltimore, MD

Tools for Data-Intensive Astronomy

– a VO Community Day in Baltimore, MD

Thursday, November 29, 2012
10AM-2PM

Location: Bahcall Auditorium, Space Telescope Science Institute

Experts from the VAO will demonstrate tools and services for data-intensive astronomy in the context of a range of science use cases and tutorials including:

- Data discovery and access
- Catalog cross comparison
- Constructing and modeling spectral energy distributions
- Time series analysis tools
- Distributed database queries
- ...and more

In the morning we will be showing a number of demonstrations of VO science applications and tools. Lunch will be provided for all participants and there will be informal discussions and Q&A over lunch. Afterwards, from ~12:45 to 2:00pm, there will be some hands-on time with some typical science use cases. You are welcome to bring your laptop and try things out for yourself.

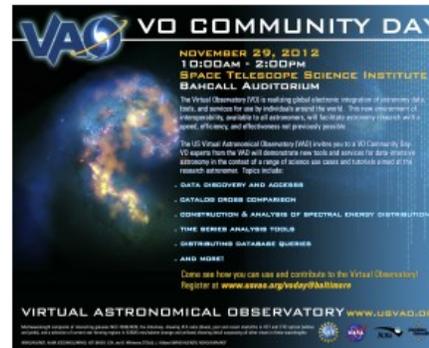

Register now at usvao.org/voday@baltimore

This event will also be webcast live:

For video see: <https://webcast.stsci.edu/webcast/>

For audio: 1 877-951-4490 Passcode is 4015008

VO impact and penetration

- At least 100 scientific papers based on use of VO tools and VO-accessible data collections

A universal ultraviolet-optical colour-colour-magnitude relation of galaxies Chilingarian, I., Zolotukhin, I., 2012, MNRAS, 419, 1727

Astroinformatics of galaxies and quasars: a new general method for photometric redshifts estimation Laurino, O., D'Abrusco, R., Longo, G., Riccio, G., 2011, MNRAS, 418, 2165

SearchCal: a Virtual Observatory tool for searching calibrators in optical long-baseline interferometry. II. The faint-object case Bonneau, D., Delfosse, X., Mourard, D., Lafrasse, S., Mella, G., Cetre, S., Clausse, J.-M., Zins, G., A&A, 2011, 535, A53

TESELA: a new Virtual Observatory tool to determine blank fields for astronomical observations Cardiel, N., Jimenez-Esteban, F. M., Alacid, J. M., Solano, E., Aberasturi, M., 2011, MNRAS, 417, 3061

WISE/2MASS-SDSS brown dwarfs candidates using Virtual Observatory tools Aberasturi, M., Solano, E., Martin, E. L., A&A, 2011, 534, L7

...

- ADS search on term “virtual observatory” (AND) yields over 2300 papers
- Astronomers make excellent use of VO tools
 - But not all astronomers, and not often enough

VO impact and penetration

- Astronomers use VO every day *without realizing it*
- A few examples
 - Hubble Legacy Archive, HEASARC “Xamin” interface, are built with “*VO Inside*”
 - Major archives and data centers are VO compliant
 - JWST has VO standards included in Level 4 Requirements
 - Dark Energy Survey pipeline and archive
 - WIYN One-Degree Imager pipeline and archive
 - PanSTARRS
 - LSST development
- ~1M VO-compliant service requests every 2 weeks from data providers in the US VAO collaboration

The Virtual Observatory

*The VO is a global framework for universal discovery, access, and **interoperability** of astronomical data*

- Image, spectrum, time series data
- Catalogs, databases
- Transient event notices
- Software and services
- Distributed computing (authentication, authorization, process management)
- Application inter-communication

International coordination and collaboration is essential!

VAO Registry Publishing Interface - Login

Using the VAO registry publishing interface, you can publish new and modify existing VO resources, representing data services, catalogs, archive institutions, and many other astronomical data concepts. This system manages resources hosted at the VAO registry at Space Telescope Science Institute. Resources in this VAO registry are accessible by search tools and VO client software throughout the IVOA. For more information, check the [publishing help page](#) or the main [VAO web page](#).

To register as a new user and start creating new resources, use the 'Register New User' button below to create an account. If during account creation your associated institution is not in the predefined list, or if you have previously published resources through the NVO or the VAO which you now wish to edit, please contact [US VAO Help](#).

Please Login to the US VAO Registry Publishing System

Specview features

- Reads spectral data from any VO-compliant spectral service, plus FITS and ASCII
- Flexible plotting options
 - Unit conversions, scaling, zoom and pan
- Line fitting and line identification from spectral line catalogs
 - Including VAMDC (Virtual Atomic and Molecular Data Center)
- Runs either as Java applet in your web browser or application on your desktop

Education and public outreach

- VAO education effort focused on World Wide Telescope (WWT) as exploration environment
www.worldwidetelescope.org
- WWT is VO-enabled
 - SAMP protocol
 - Embedded cone-search and SIAP searches
- >2 million downloads → has immense impact
- Microsoft Research is ongoing VO collaborator
- VAO EPO program no longer supported, but websites and tutorials remain available

VAO Future Planning

- NSF/NASA joint review completed FY12
 - Announced Project closure end of FY14
- VAO Project is developing restructure plan (Feb '13)
 - As a result of funding reduced and prioritization for sustaining the infrastructure
- Anticipate Archive Data Centers with community and partners will play more critical role, opportunity for leadership

MAST

Role in Big Data and Opportunity for Leadership

- VO efforts over the past decade have led to a rich and versatile infrastructure
- We cannot afford to lose this!

“VAO and its NVO predecessor have provided an essential foundation on which a future virtual observatory can be maintained. We are examining models that will maximize the use of NSF and NASA resources to achieve the ultimate goal of maintaining a virtual observatory, including the successful protocols and standards, that will be an important research resource for our scientific community. We anticipate that existing VAO project members will be strong contributors to that future.”

-- J. Ulvestad (NSF), P. Hertz (NASA)

Letter dated 9/26/2012, sent 10/10/2012
